JOB MARKET PAPER

- **Efficient Sovereign Debt Buybacks, 2025:** This paper explores the conditions under which sovereign debt buybacks are Pareto efficient, challenging the conventional view that such operations are detrimental to sovereign borrowers. Using a model of strategic lending, I show that buybacks can be rationalized as part of an optimal contract between a sovereign borrower and foreign lenders. In particular, buybacks allow bonds to function like Arrow securities. This is because they take place in the secondary market, where only legacy lenders operate, granting them market power, as opposed to the primary market, where new entrants ensure competitive returns. The model aligns with the recent empirical evidence in Brazil, including a premium paid on buyback operations. These findings offer insights into sovereign debt management and the implementation of optimal contracts.

POLICY PAPERS

- **Euro Area fiscal policies and capacity in post-pandemic times (joint with Ramon Marimon), 2021:** The main legacy of the post-Covid-19-crisis euro area fiscal framework should be the development of a unique integrated fiscal policy and of a permanent and independent Fiscal Fund to implement it. To arrive at this conclusion, we analyse the challenges and build on current research on the optimal design of a fiscal fund. We characterise the fiscal policy, and the development of the Fund, together with the role and form that the Stability and Growth Pact can take in the new fiscal framework.
